SUMMARY

Final-year software engineering student at Bahir Dar University (graduating June 2027) who builds mobile apps and the backends behind them. I ship products as several coordinated parts: a REST API, a mobile app, a web client, an admin dashboard and documentation. I am looking for a graduate or junior role starting mid-2027, internships now, and freelance projects where I can ship Flutter and full-stack features and keep learning from a team.

EXPERIENCE

Software Engineering Intern · ARITB · Bahir Dar · Feb to May 2026

SELECTED PROJECTS

YoMart · Shop platform in five parts
2026 · Flutter, Express, MongoDB · github.com/kalaabalb/yomart-*

- Built as five coordinated repositories: REST API, customer mobile app, web client, admin dashboard and technical documentation.
- Documentation covers architecture and operations, so the project can be handed over.

Family Academy · Learning platform and download hub
2026 · Cross-platform builds, HTML, CSS, JavaScript, GitHub Releases · familyacademy.et

- Client apps, a TV client, a backend and an admin panel, with a public landing page.
- Download hub with installers for Windows, macOS, Linux, Android and TV, served from GitHub Releases and usable with keyboard, touch and TV remote.

GitHub Repo Inspector · Repository analysis tool
2026 (early MVP) · Flutter, FastAPI, GitHub API, Gemini · github.com/kalaabalb/github-repo-inspector

- Turns a public repository into a technical report by reading its file tree, config and selected sources, without cloning or running anything.
- Flags risky configuration, documentation mismatches, TODO markers and missing tests; an optional Gemini step explains the findings.

KalaOS · Profile built as an operating system
2026 · Design system, generated SVG, JavaScript · github.com/kalaabalb/kalaabalb

- GitHub profile written as an operating system with nine sections, backed by its own design tokens and a generation engine.
- Interactive desktop portfolio with a window manager, terminal, file browser and search.

SKILLS

Mobile	Flutter, Dart (Android, iOS, desktop)
Backend	Node.js, Express, Python, FastAPI, REST API design
Data and tools	MongoDB, Git, GitHub API and Releases
Web	HTML, CSS, JavaScript, responsive layouts
Practice	AI-assisted development, written documentation, algorithm practice on LeetCode

EDUCATION AND LANGUAGES

BSc, Software Engineering · Bahir Dar University, Ethiopia · 2022 to June 2027 (expected)
Languages: Amharic (native) · English (conversational)

AVAILABILITY

Open to full-time roles and freelance projects. Remote-friendly, working hours in UTC+3.
